Legacy Product Recovery Opportunities

Good stewardship of natural resources suggests that we seize those highest value opportunities to repair, renew, repurpose and recycle the materials used in our products when those products have reached the end of their useful lives. Toward that end these three legacy products — Cove Recliner, 1030 Table and Beechwood Loft Bed — *representative of all Sauder Mfg products* — have four recovery options:

[Beechwood Bed A&D Recycling.pdf](#) [Cove Recliner A&D Recycling.pdf](#) [1030 Tables A&D Recycling.pdf](#)

REPAIR

Because Cove Recliner, the 1030 Table and the Beechwood Bed are all modular in construction, should any part break or wear out it can be repaired, and the unit made to function once again like new. Most Sauder products have a warranty of 10 to 25 years, which means that prior to the expiration of the warranty broken parts are available at no charge. And even after the warranty expires, replacement parts and upholstery are always available for purchase.

- Step One: On the Cove Recliner, 1030 table or Beechwood Bed find the manufacturing label (usually on a concealed surface). It will have the Model Number and Date of Manufacture.
- Step Two: Call a Customer Care Representative at Sauder (800-777-5055) and request the desired Assembly-Disassembly Instruction. Those instructions can be either immediately emailed or faxed to you, or a hard copy can be mailed.
- Step Three: Use the Assembly-Disassembly Instruction to identify the part or parts that need to be repaired. Contact your local Sauder, Wieland Healthcare or Butler Representative and she or he will place that order for you.
- Step Four: After receiving your replacement part or parts, follow each step of the A&D Instruction to repair your unit.

RENEW

Finishes fade, fabrics wear out, and upholstery goes out of fashion. For that reason these three legacy products are fully renewable. The upholstery on the Cove Recliner is attached with hook-and-loop closures, which means that any component, or the entire recliner, can be easily recovered and brought

up to date. And the solid wood frames of the 1030 Table and Beechwood Bed are modular, so faded or scratched components can be removed, refinished or replaced, and fully renewed.

- Step One: On the Cove Recliner, 1030 table or Beechwood Bed find the manufacturing label (usually on a concealed surface). It will have the Model Number and Date of Manufacture.
- Step Two: Call a Customer Care Representative at Sauder (800-777-5055) and request the desired Assembly-Disassembly Instruction. Those instructions can be either immediately emailed or faxed to you, or a hard copy can be mailed.
- Step Three: Use the Assembly-Disassembly Instruction to identify the part or parts that need to be renewed. Contact your local Sauder, Wieland Healthcare or Butler Representative and she or he will place that order for you.
- Step Four: After receiving your replacement upholstery or parts, follow each step of the A&D Instruction to renew your unit.

REPURPOSE

Your old furniture can be someone else's new furniture. When it's time to purchase new recliners, tables or beds please consider repurposing your furniture. Rather than haul it away and dump it in landfills a wonderful option is to donate it for reuse by charities, low-budget institutions and third-world countries.

Sauder is partnered with two organizations, IRN and GRRO, that will collect your unwanted furniture, match that inventory with needs nationally and internationally, and deliver that furniture to those who would be so very grateful to receive it.

Available from a Sauder, Wieland Healthcare or Butler Representative, or downloadable from this website, is a full-color four-page brochure entitled "Repurpose your Pre-Owned Furniture. In it you'll find all the information you need to make your old furniture someone else's new furniture.

RECYCLE

Sometimes the best choice for one of these legacy products is to have it recycled.

- Step One: Call a Customer Care Representative at Sauder (800-777-5055) and request the desired Disassembly Instruction. Those instructions can be either immediately emailed or faxed to you, or a hard copy can be mailed.
- Step Two: Follow each step of the Disassembly Instruction to completely disassemble the unit into its most basic component parts.

Step Three: Follow the Recycling Instructions found at the end of the document, separating into distinct piles the various types of materials of which the product was composed.

Step Four: Recycle:

- Metal – all metal parts can be brought to a local metal recycler who will purchase from you those metal parts.
- Plastic – all plastic parts can be brought to a local recycling center who will accept from you those plastic parts.
- Foam – all loose foam parts can be brought to a local manufacturer of carpet padding who will grind up the foam and reuse it for that purpose. Large pieces of foam that are glued to a substrate, such as seat decks and back cushions can, with little effort, be torn free of those substrates and recycled, as well.
- Solid Wood – all non-processed wood can be either burned for energy or repurposed.

Step Five: Dispose:

- Processed Wood – all wood impregnated with glues or resins, such as plywood, oriented strand board (OSB), particle board and medium density fiberboard (MDF) must be transported to a landfill.
- Upholstery
- Foam – foam that cannot be separated from the substrate to which it is glued needs to be transported, along with that substrate, to a landfill.
